[01:10:37] 🗨️ ANSWER Perfect! I've successfully scraped all four websites:

1. **Cloudrift** - https://www.cloudrift.ai/i...

I'll scrape these websites for you to collect their pricing and inference information.
Perfect! I've successfully scraped all four websites:

1. **Cloudrift** - https://www.cloudrift.ai/inference
2. **DeepInfra** - https://deepinfra.com/pricing
3. **Fireworks** - https://fireworks.ai/pricing#serverless-pricing
4. **Groq** - https://groq.com/pricing

The content has been scraped and stored in both Markdown and HTML formats. The data includes:
- Pricing information for each provider
- Their inference capabilities
- Rate limits and model offerings
- Any other relevant details from their pricing/inference pages

The scraped data has been cached and includes change tracking, so you can monitor for pricing updates in the future. Would you like me to extract specific information from any of these scraped websites?

[01:16:07] ANSWER Based on the scraped pricing information, I can see that **clouddrift AI does not currently list Deep...

I'll help you compare the costs for DeepSeek V3 between clouddrift AI and DeepInfra. Let me scrape their pricing pages.
Now let me extract the pricing information from both providers:
Based on the scraped pricing information, I can see that **clouddrift AI does not currently list DeepSeek V3** in their available models. They only show Qwen3.6-35B-A3B-FP8 as their available model.

However, **DeepInfra has several DeepSeek V3 variants** with the following pricing:

## DeepInfra - DeepSeek V3 Pricing:

| Model | Context | Input (per 1M tokens) | Output (per 1M tokens) |
|---|---|---|---|
| **DeepSeek-V3** | 160k | $0.32 | $0.89 |
| **DeepSeek-V3-0324** | 160k | $0.24 / $0.135 cached | $0.90 |
| **DeepSeek-V3.1** | 160k | $0.25 / $0.13 cached | $0.95 |
| **DeepSeek-V3.2** | 160k | $0.26 / $0.13 cached | $0.38 |

## Summary:
- **clouddrift AI**: Does not currently offer DeepSeek V3 (they mention it on their homepage but it's not in their pricing/available models)
- **DeepInfra**: Offers 4 variants of DeepSeek V3 with the most cost-effective being:
  - **DeepSeek-V3-0324**: $0.24 input / $0.90 output (with prompt caching at $0.135)
  - **Best for low output costs: DeepSeek-V3.2** at $0.26 input / $0.38 output

If you're looking to use DeepSeek V3, **DeepInfra is currently your option** between these two providers, with DeepSeek-V3.2 offering the lowest output token costs at $0.38 per 1M tokens.
